BUSINESSCRAFT IS THE LEADING FULLY INTEGRATED SOFTWARE PACKAGE FOR BUILDERS

Developed right here in Australia for Australian builders, our job tracking, estimating & ordering modules are fully integrated with our industry specific accounts & financials. Giving you the margin control you strive for.

KEY FEATURES INCLUDE

- Job Tracking** Utilise BusinessCraft events to not only know where every job is up to, but compare the baseline date to the calculated forecast or the actual completion date to understand where you have any 'white space'.
- Extra to Schedule** Track where ALL of your extra to schedule (or margin erosion) costs are incurred, with the ability to record the reason, person responsible and extra comments for flexible reporting. This is controlled within both Purchasing and Accounts Payable.
- Efficient Ordering** Utilise email for the distribution of Purchase Orders, and optionally attach required drawings or other documentation to reduce ordering overheads.
- Compare Standard Bill of Materials** Produce the cost comparison report to compare up to 20 standard bills or assemblies on a single page to review costings. Let BusinessCraft calculate a recommended sale price based on a standard margin to automatically update your pricebook.
- Record Colour Selections** Track all colour selections and be able to report in conjunction with the job progress. Then automatically modify your production estimate to print on Purchase Orders, ensuring no selections are overlooked.
